

2nd Grade News

This has already been a very exciting year in 2nd Grade. We have learned all about asking and answering questions, solving word problems, the human body, our country, and how to improve our writing. We also had visitors here for a quite a few weeks that we were able to observe from day to day. We watched the tiny creatures from day one. They started out small and hairy and grew each day until they were ready to transform. They spent some time developing into their next stage of life and soon we had BUTTERFLIES fluttering around in their habitat. Each new stage of the caterpillars' life was so fun and interesting to watch. This project tied right into our discussions of animal life cycles and animal habitats.
